

PRESS RELEASE - FOR IMMEDIATE RELEASE

Doctors and Scientists Accuse Medical Regulator of Downplaying COVID-19 Vaccine Dangers

The European Medicines Agency is misleading citizens into medical experimentation, experts warn

April 1st 2021

Doctors and scientists from 25 countries have today issued a [rebuttal letter](#) to the European Medicines Agency (EMA), following the regulator's dismissal of their earlier warnings regarding COVID-19 vaccine dangers from clotting and bleeding.

Within days of the EMA receiving the group's [original letter](#) on March 1st, outlining risks of blood disorders from COVID-19 vaccines, over a dozen countries suspended the AstraZeneca vaccine following deaths from clotting and bleeding, as the doctors had warned.

On March 23rd, however, the EMA [dismissed](#) the group's concerns as relating to "minor" and "rare" events, concluding that "a positive benefit-risk balance has been established."

The doctors and scientists have today hit back, accusing the EMA of misleading the public on the vaccines' true risk-benefit profile. "Your reply of March 23 is unconvincing and unacceptable," they wrote, noting that recorded cases of life-threatening cerebral venous thrombosis (CSVT) post-vaccination likely "represent just the tip of a huge iceberg". Common reactions to vaccination, including headache, nausea, blurred vision and vomiting, they state, are symptoms of CSVT, and should be assessed as such, immediately.

Clotting and bleeding after vaccination can also "be expected to increase with each re-vaccination, and each intervening coronavirus exposure" the group warned. Over time "this renders both repeated vaccination and common coronaviruses dangerous to young and healthy age groups, for whom - in the absence of 'vaccination' - COVID-19 poses no substantive risk.

"Such is the real risk-benefit analysis of the COVID-19 'vaccines'. Either the EMA lacks the subject-matter expertise to appreciate the molecular science of this reality, or it lacks the medical ethics to act accordingly."

The group, Doctors for Covid Ethics, which includes professors of immunology and microbiology, described the EMA's responses to their concerns as "unscientific", "vague", and lacking credibility. They have offered to liaise with the agency to mitigate against vaccination risks and ethics violations, including helping the EMA to "craft a focussed pharmacovigilance plan."

The group warned that continuing to administer inadequately tested gene-based COVID-19 vaccines represents dangerous medical experimentation, whose "true risks far outweigh any theoretical benefits", reflecting "serious violations of medical ethics and citizens' medical rights."

"Misleading populations into accepting investigational agents such as the gene-based COVID-19 'vaccines', or coercing them through 'vaccine passports', constitutes clear and egregious violations of the Nuremberg Code", they caution.

The letter is addressed to Emer Cooke, Executive Director of the EMA, and was copied to the lawyer Reiner Fuellmich, Charles Michel, President of the Council of Europe, and Ursula von der Leyen, President of the European Commission.
