

Family Financial Disclosure Form for Covid-19 Injections

THIS FORM HAS TWO PARTS:

| | |
|------------------------------|---|
| PART 1 Pages 1–12 | Introduction and references. |
| PART 2 Pages 13–24 | Family Form to be completed by family member/s. |

Disclaimer: This form is provided to facilitate effective family due diligence, communication, and planning. It is essential that each person and each family take responsibility to identify and access the information they believe to be most relevant to their situation and decisions, and take responsibility to assess and manage their individual and collective risk as they believe best.

INTRODUCTION

The goal of this Family Financial Disclosure Form is to ensure that an adverse event or death of one family member does not translate into long-lived or permanent financial destruction for the entire family.

This form was created to assist families to communicate regarding and to prepare for the family-wide financial impact of adverse events, if any, resulting from a Covid-19 injection. Reported adverse events following Covid-19 injections include: death, anaphylaxis, blood clots and related complications, leaky blood vessels and related complications, heart problems (including myocarditis, pericarditis, and other cardiac issues), neurological disorders, autoimmune disorders, cancer, other chronic and inflammatory conditions, blindness and deafness, infertility, fetal damage, miscarriage and stillbirth, and Covid-19.

Traditionally, informed consent forms for vaccination do not provide disclosure or statistics related to financial costs of possible injury, disability, or death, nor do they discuss the impact on family time, resources, health, and wealth—impacts that may include reduced career potential, divorce, or effects on the education and future plans of other family members.

Consequently, it is essential that prior to receiving a Covid-19 injection, parents and family members with financial responsibility for children and spouses not only do thorough due diligence—providing adequate disclosures to their families regarding the potential costs to family members of adverse events or death—but also take steps to protect themselves and family members from the material adverse financial consequences of an adverse event or death.

■ Authorized Covid-19 Injections

National regulatory agencies granted emergency authorizations for Covid-19 injections after abbreviated clinical trials and without long-term safety testing. In the U.S., this process resulted in three Covid-19 injections granted “emergency use authorization” (EUA) by the Food and Drug Administration (FDA): the mRNA injections developed by Pfizer with German partner BioNTech (now authorized for ages six months and up) and by biotechnology firm Moderna in partnership with the National Institute of Allergy and Infectious Diseases (NIAID) (also ages six months and up); and the adenovirus-vectored injection made by Janssen, a Johnson & Johnson (J&J) subsidiary (18 years and up).¹⁻³ On May 5, 2022, FDA limited the authorized use of the J&J injection to “certain individuals,” citing its updated analysis of the risk of life-threatening blood clots (thrombocytopenia);⁴ earlier FDA warnings linked the J&J shot to an increased risk of Guillain-Barré syndrome, a condition involving peripheral nerve damage. On June 17, 2022, FDA granted EUA status to both the Pfizer and Moderna injections for use in children all the way down to six months of age, despite children’s almost nonexistent risk of illness⁵

In January 2022, a U.S. District Judge ordered the FDA to release, on an expedited basis, hundreds of thousands of pages of Pfizer documents in its possession. Dr. Naomi Wolf,

CEO of the *Daily Clout*, has organized highly trained teams of volunteer experts to review the documents, which are revealing numerous risks and harms not disclosed to the public, including over 1200 deaths in the first three months alone as well as serious risks to unborn babies.

Importantly, though FDA issued formal approval for the Pfizer injection under the brand name “Comirnaty” on August 23, 2021 (for ages 16 and up) and formally approved the Moderna injection under the brand name “Spikevax” on January 31, 2022 (for ages 18 and up), there is no indication that these versions—what some have termed “ghost vaccines”—are actually available in the United States; this means that Americans continue to receive EUA injections, not the licensed versions.⁶

This distinction between EUA and licensed injections has important legal ramifications because, under the Public Readiness and Emergency Preparedness (PREP) Act enacted in the U.S. in 2005, EUA injections are classified as “medical countermeasures” that are immune “from legal liability for all claims for loss” relating to the injections’ administration or use. The PREP Act defines “losses” as death; physical, mental, or emotional injury, illness or disability; and “loss of or damage to property, including business interruption loss.”⁷ Although injured individuals may apply for compensation from the Countermeasures Injury Compensation Program (CICP) within a year of injury, the program—deemed “horrible” by many—has not paid out a single Covid vaccine injury claim; it covers neither legal fees nor pain and suffering, and has a high burden of proof.⁸ Fully licensed vaccines, when recommended by the Centers for Disease Control and Prevention (CDC) for children or pregnant women, are also immune from liability under the 1986 National Childhood Vaccine Injury Act. Under that legislation, the vaccine-injured can seek compensation from the National Vaccine Injury Compensation Program (NVICP),⁹ but that program, too, is cumbersome and historically has only compensated one-third of petitioners. Moreover, even for successful claims, the monetary amount often falls short of the financial devastation created. In theory, the manufacturers of licensed vaccines *not* on the childhood or pregnancy schedules *can* be sued—which may be why Comirnaty and Spikevax seem to be available in name only.

Outside the U.S., experimental Covid-19 injections are currently administered under “conditional marketing authorization” (European Union [EU]), “provisional approval” (Australia and New Zealand), or similar emergency provisions in other countries. Initially, many OECD countries authorized and used the Oxford/AstraZeneca injection (“Vaxzevria”) developed in the UK, which, like J&J’s shot, uses an adenovirus vector, and in May 2022, the European Medicines Agency (EMA) endorsed use of the AstraZeneca injection as a booster.¹⁰ However, following early concerns about blood clots that paused or halted the injection’s use in a number of European countries,¹¹ AstraZeneca’s market share steadily declined, with the Pfizer and Moderna injections dominating the market in most high-income nations.¹² The EU is now dumping millions of doses of AstraZeneca’s “unpopular” product in low-income countries.¹³

The “Nuvaxovid” injection developed by American biotech firm Novavax received its first EUA from Indonesia in November 2021, with the EU, the UK, Australia, Canada, India, and

other Asian countries subsequently following suit.¹⁴ In June 2022, FDA advisors recommended that the Novavax injection be granted EUA status for use in the United States.¹⁵ FDA has not yet decided whether to authorize it.

As of May 2022, a total of 11 Covid injections had been granted emergency use listing by the World Health Organization (WHO).¹⁶

■ Covid-19 Injections: Gene Therapy

Though marketed as “vaccines,” mRNA and adenovirus-vectored Covid-19 injections are experimental gene therapy, sharing the end goal of getting genetic instructions into a person’s cells and “tricking” the cells into making the coronavirus spike protein. This is readily apparent in the language used by the injections’ developers.

For example, the never-before-authorized mRNA approach is described as a means of “programming a person’s cells”¹⁷ or (using Moderna’s terminology) deploying new “software.”¹⁸ The Pfizer and Moderna Covid injections use lipid nanoparticles (LNPs) as an in-built “gene delivery” or “carrier” system that transports synthetic mRNA into the cell’s cytoplasm; the LNPs not only shield the mRNA and promote cellular uptake,¹⁹ but also function as adjuvants, “revving up” the immune system. A unique and worrisome feature of these injections is the prospect of the mRNA-LNPs crossing the blood-brain barrier,¹⁷ which can damage the brain²¹ and result in a “nightmare scenario.”²² According to the expert group Doctors for Covid Ethics, the mRNA technology is so inherently dangerous that the Covid injections “should never even have been introduced.”¹⁹

The J&J and AstraZeneca injections use genetically modified common cold viruses as a Trojan horse to shuttle spike protein DNA (genetic instructions) into the cells. As Doctors for Covid Ethics reminds the public, “introducing DNA into human cells. . . constitutes gene therapy,” raising the possibility of “stable, irreversible incorporation into the human genome.”²³ Before Covid-19, adenovirus-vectored injections already had a “checkered past” as a “failed gene therapy.”²⁴ In late 2019, FDA nevertheless approved an adenovirus-vectored Ebola vaccine, and the technology has also been used in experimental Zika and HIV vaccines.²⁵ The Janssen and AstraZeneca Covid-19 jabs are the first such injections to be authorized (on an emergency basis) for general population use.

Biodistribution studies indicate that all of the Covid injections contain components that can travel from the injection site and accumulate in vital organs such as the liver, adrenal glands, spleen, and ovaries.²⁶ Doctors for Covid Ethics also hypothesize bioaccumulation in the placenta and lactating mammary glands, posing risks to fertility and to breastfed newborns.²⁷ In June 2022, Dr. Wolf detailed alarming Pfizer data on pregnancy and baby harms not disclosed by either Pfizer or FDA.²⁸ This would not be the first time that vaccines have threatened women’s fertility, as explained in detail in the 2022 documentary, *Infertility: A Diabolical Agenda*.²⁹

■ Additional Covid-19 Injection Risks

PEG and Polysorbate 80: The LNPs in mRNA injections are coated with polyethylene glycol (PEG), a controversial polymer—synthetic and nondegradable—associated with adverse immune responses.³⁰ Moderna acknowledged that the LNPs “could lead to significant adverse events,”³¹ and, early on, FDA identified PEG as the likely culprit responsible for hypersensitivity reactions, including anaphylaxis.³² CDC warns individuals with known PEG allergies not to get mRNA injections, telling them to get the J&J injection without mentioning that many people are allergic to PEG without knowing it. The J&J and AstraZeneca injections contain a substance structurally similar to PEG called polysorbate 80 that can provoke the same type of allergic reaction (but CDC tells individuals allergic to polysorbates to get mRNA injections containing PEG!).³³

Contaminants: In addition to containing unknown (or redacted) ingredients, nanoparticles, and proteins derived from fetal cell lines, the Covid injections have been found to contain a variety of contaminants,³⁴ including metallic particles.³⁵ In September 2021, Japan halted the distribution of 1.6 million doses of Moderna vaccine after finding stainless steel particles,³⁶ and more recently, almost three-quarters of a million Moderna batches were recalled in Europe.³⁷

Adjuvants: The Novavax injection features a technology that marshals moth cells to make “lots of spike proteins”; the “premade” spike proteins then get injected, accompanied by a powerful nanoparticle-based adjuvant (reliant on detergent-like substances called saponins) that is said to generate “a more potent immune response.”³⁸ Researchers have documented a number of “undesirable” side effects associated with this type of adjuvant, including the rupturing of red blood cells (hemolysis); in understated fashion, they have noted the need to “balance. . . potency and adverse reactions.”³⁹

■ Covid-19 Injection Mandates

With the rollout of experimental Covid injections, national and local governments all over the world, along with a wide variety of public and private sector organizations, began putting unethical⁴⁰ vaccine mandates in place—mandates that violate fundamental human rights⁴¹—to coerce the public into accepting the injections and subsequent “boosters.” The compulsory measures imposed by schools and universities,⁴² critical industries such as aviation and health care,⁴³ and countries seeking nationwide mandates⁴⁴ generated fierce opposition, including in the courtroom.

Legal and other forms of pushback have successfully overturned mandates in a variety of jurisdictions, with courts and legislators in the U.S., Europe, India, and elsewhere agreeing that such mandates represent constitutional, religious, or medical overreach. In the United States, for example, the Occupational Safety and Health Administration (OSHA) had to withdraw a rule mandating the injections for large employers in January 2022 after the Supreme Court delivered a mixed decision that blocked the OSHA rule⁴⁵ while allowing mandates for health workers.⁴⁶ U.S. airlines, along with the Federal Aviation Administration and U.S. Department of Transportation, are also facing widespread lawsuits.⁴⁷ In early

May, 2022, India's Supreme Court issued a milestone ruling asserting that the Indian constitution "gives everyone the right to refuse vaccination."⁴⁸ In European countries such as Germany⁴⁹ and Austria,⁵⁰ members of parliament have rejected or suspended mandates.

■ Adverse Events

Since the Covid injections' debut, millions around the world have reported serious adverse reactions—far outstripping recorded adverse reactions to other vaccines⁵¹—and many countries are witnessing a sharp rise in all-cause mortality.⁵²

The ranks of those injured or killed by Covid injections include tens of thousands of previously healthy children in the U.S. and Europe alone,^{27,53} whereas the Covid survival rate for children is 99.997%. A comprehensive risk-benefit analysis of the use of the mRNA Covid injections in children and adolescents conducted by Doctors for Covid Ethics warns of "catastrophically bad" safety profiles, citing the potential for heart problems, genotoxicity (damage to human genetic material), reproductive toxicity, and autoimmunity, among other possible harms. Parents need to understand the full range of risks, including financial, before allowing a child to receive a Covid injection.⁵⁴

Adverse events can occur in the short term—or several or more years after vaccination. The alarming uptick in morbidity and mortality following Covid injections already includes increased cancers,⁵⁵ heart problems,⁵⁶ and neurodegenerative diseases,⁵⁷ as well as reproductive problems such as miscarriage, stillbirth, early infant death, female infertility, and ovarian dysfunction.⁵⁸

Nowhere has the devastation caused by Covid injections in young people and younger adults been more apparent than in the world of sports. As professional athletes were pressured to receive the injections, video footage surfaced from all over the world showing countless young and healthy athletes dropping to the ground with heart problems and other sometimes fatal reactions. In a filmed interview, legendary British footballer Matt Le Tissier discussed the explosion of adverse events among athletes, explaining that he had "never seen anything like it" in his years as a football star and sports commentator.⁵⁹

In December 2021, Professor Mark Skidmore of Michigan State University (with dual appointments in Agricultural, Food, and Resource Economics and Economics) conducted a nationwide survey to estimate the number of fatalities associated with the Covid injections.⁶⁰ Dr. Skidmore administered the online "Covid-19 Health Experiences Survey" to a representative sample of 3,000 U.S. residents balanced (to the extent possible) on age, gender, and income. The survey collected information about respondents' direct experiences with Covid-19 illness and injections, as well as related experiences within respondents' social circles.

About half of the respondents had received Covid shots (with more than one in six experiencing health issues post-injection), and one in four reported knowing others who had significant post-injection health issues. Respondents described deaths as well as non-fatal but severe adverse events such as heart problems, blood clots, strokes, and paralysis. Extrapolating from his results, Dr. Skidmore's conservative estimate is that between

264,000 and 308,000 people may have died following Covid-19 injections in the U.S., and 1.1 million may have experienced life-threatening or life-shortening injuries. The survey report includes two appendices with 30 pages of vivid and sobering descriptions of adverse events experienced by respondents or people they knew.

■ Adverse Event Reporting Databases

The following is a selected list of national databases that make adverse event reports available to the public. The numbers reported to these databases are known to vastly undercount vaccine injuries because the “passive” reporting systems rely on the willingness and ability of injured individuals and health care professionals to submit reports.

Vaccine Adverse Event Reporting System (VAERS), Department of Health and Human Services (U.S.)

VAERS is a voluntary reporting system co-administered by the CDC and FDA.⁶¹ Dr. Sherri Tenpenny estimates that VAERS data represent approximately 10% of actual adverse events. A Harvard study commissioned in 2010 by the federal government produced an even lower estimate, concluding that less than 1% of adverse events get reported.⁶² In June 2021, independent analysts estimated that VAERS was about nine weeks behind in publishing adverse events reported following Covid-19 injections, and by August, they suggested “the strong possibility” of “throttling, backlogging, or downright suppression of the death data being reported out of VAERS.”⁶³

VAERS reports are accessible through the CDC Wonder search engine or through the more user-friendly MedAlerts search engine maintained by the National Vaccine Information Center (NVIC). MedAlerts also offers more powerful search capabilities and more extensive reporting.

<https://vaers.hhs.gov>

<https://wonder.cdc.gov/vaers.html>

<https://www.medalerts.org/>

EudraVigilance (27 European countries), European Medicines Agency

The European Medicines Agency maintains a database of suspected adverse drug reactions accessible to the general public, called EudraVigilance, which compiles adverse event reports for each of the five Covid injections currently available in the EU.⁶⁴ The database includes the number of case reports as well as the number of total injuries (an individual “case” may experience multiple injuries).

Summary of most recent number of reports of “suspected side effects,” by injection: <https://www.ema.europa.eu/en/human-regulatory/overview/public-health-threats/coronavirus-disease-covid-19/treatments-vaccines/vaccines-covid-19/safety-covid-19-vaccines>

Covid-19 reports (to access, follow link, click on the letter “C,” and scroll down to “COVID-19”): <https://www.adrreports.eu/en/index.html>

VaxxTracker

VaxxTracker offers “a safe place to report negative side-effects” of Covid-19 injections and “acts independently from all government, pharmaceutical, or lobbying groups.” About 80% of all records on the site are imported from VAERS, while the remainder are reported directly by physicians and the public. The site’s Covid-19 statistics group adverse events into about 20 different categories.

<https://www.vaxxtracker.com/VaxStatistics.aspx>

UK Medical Freedom Alliance (UKMFA) (global)

The UKMFA publishes a physician-compiled weekly round-up of Covid-19 vaccine safety reports and news (see “Vaccine Safety Update Weekly Reports – The Daily Sceptic”), as well as resources pertaining to informed consent, vaccine exemptions, and more.

■ **Medical/Scientific Resources**

Comprehensive, high-integrity medical and scientific information, including briefs and reports summarizing what is known about the risks of Covid-19 injections and adverse events, is available (and routinely updated) at the following websites:

America’s Frontline Doctors (AFLDS): AFLDS’ website includes information about Covid-19 treatment options, news, videos, legal information, and numerous other resources.

<https://americasfrontlinedoctors.org/>

Children’s Health Defense (CHD): In addition to reporting on vaccine safety topics via its flagship online news outlet *The Defender*, CHD offers a “Fighting COVID Mandates” toolkit and related resources, a series of eBooks (including eBooks on vaccine mandates and protection of individual rights), a research library, and a “Community Corner.”

<https://childrenshealthdefense.org/>

Doctors for Covid Ethics (D4CE): Among the excellent resources provided by this group of doctors and scientists from 30 countries are crucial pathology findings from autopsies on persons deceased within days to months of receiving a Covid injection; a comprehensive review by Dr. Michael Yeadon titled “The Covid Lies”; Expert Statements outlining the serious risks of the Covid injections, especially for children; open letters to fellow doctors and scientists; and video archives of D4CE’s interdisciplinary “Gold Standard Symposiums” featuring experts in science, medicine, finance, media, the law, and more.

■ Other Resources

Global Landscape on Vaccine ID Passports: This book (by Corey Lynn of the *Corey's Digs* website) dissects the push for vaccine passports and digital identities and explains why it is so important to reject them and not comply. Vaccine passports and digital IDs, along with surveillance technologies and central bank digital currencies (CBDCs), are tools intended to facilitate centralized control over each person's finances, spending, health behavior, travel, and more—a global social credit system.

60. See "How many people died from the Covid-19 inoculations? An estimate based on a survey of the United States population" (<https://mark-skidmore.com/wp-content/uploads/2022/02/Survey-of-Covid-Heath-Experiences-Working.pdf>).
61. Between December 14, 2020 and May 20, 2022, VAERS received 1,277,980 reports of adverse events across all age groups following Covid injections (including "foreign reports" estimated to be 10% of the total). This total includes 232,694 serious injuries, among which were 28,312 deaths. Among the U.S.-based deaths, 59% occurred in people whose symptom onset occurred within 48 hours of injection. See "Young boy died of myocarditis after Pfizer vaccine, says CDC before signing off on 3rd shot for kids 5-11" (<https://childrenshealthdefense.org/defender/vaers-boy-died-myocarditis-pfizer-vaccine-cdc-3rd-shot-kids/>).
62. See *Electronic Support for Public Health—Vaccine Adverse Event Reporting System (ESP:VAERS)* (<https://digital.ahrq.gov/sites/default/files/docs/publication/r18hso17045-lazarus-final-report-2011.pdf>).
63. See "What is the backlog (in terms of time) for the publishing of VAERS records for COVID-19 vaccines?" (<https://vaersanalysis.info/2021/06/23/what-is-the-backlog-in-terms-of-time-for-the-publishing-of-vaers-records-for-covid-19-vaccines/>); see also "Another way to view the throttling of VAERS death data vs. administered vax doses" (<https://vaersanalysis.info/2021/08/21/another-way-to-view-the-throttling-of-vaers-death-data-vs-administered-vax-doses/>).
64. Through May 21, 2022, EudraVigilance had received 1,800,961 case reports totaling over 4.1 million different "suspected side effects" to the five authorized Covid injections, including 43,898 fatalities: Pfizer (53% of cases), AstraZeneca (27%), Moderna (16%), J&J (3%), and Novavax (0.04%). (Click on the links for each injection here: <https://vaccineimpact.com/2022/43898-dead-4190493-injured-following-covid-19-vaccines-in-european-database-of-adverse-reactions/>).

Family Financial Disclosure Form for Covid-19 Injections

FROM: [ADULT FAMILY MEMBER]

TO: [ADULT SPOUSE AND CHILDREN]

DUE DILIGENCE

I have completed my due diligence on the Covid-19 injection that I propose to take.

- 1a. ☐ I have reviewed the available **databases provided of material adverse events** from Covid-19 injections, including deaths reported to date by people who have received these injections.
- 1b. ☐ I have reviewed the results of the "Covid-19 Health Experiences Survey" conducted by Dr. Mark Skidmore, including the appendices listing adverse events experienced or observed by respondents.¹
- 1c. ☐ I have watched the interview with legendary British footballer Matt Le Tissier and the video on athletes collapsing after receiving Covid-19 injections.²
2. ☐ I understand that this Covid-19 injection is **made by**:
- ☐ **Moderna**: a company that in 10 years had never brought a single product to market prior to the coronavirus vaccine³
 - ☐ **Pfizer**: a company with a demonstrated history of enforcement settlements for fraudulent marketing⁴
 - ☐ **Johnson & Johnson**: a company with a lengthy record of health care fraud facing billions in payouts for marketing baby powder known for decades to be tainted with cancer-causing asbestos⁵
 - ☐ **AstraZeneca**: a company that illegally marketed an anti-psychotic drug to children and the elderly, paying one of the top 10 pharmaceutical company settlements ever⁶
 - ☐ **Novavax**: a company involved in lawsuits for fraudulent misrepresentation⁷
 - ☐ **Other [specify]:** _____

3. ☐ [U.S. only]: I understand that although two Covid-19 injections (Pfizer's Comirnaty and Moderna's Spikevax) received formal FDA approval for individuals age 16 and up (Pfizer) and age 18 and up (Moderna), it is uncertain whether either fully licensed product is actually in use in the United States. I also understand that the FDA downgraded its endorsement of the Johnson & Johnson injection. I understand that in all likelihood, I would be receiving a dose distributed under **emergency use authorization (EUA)**, which according to FDA, is "legally distinct" from the licensed product.⁸
4. ☐ [Non-U.S.]: I understand that this Covid-19 injection is being distributed under a **conditional or emergency use authorization** and has not been formally approved by [national regulatory agency].
5. ☐ I understand that this Covid-19 injection is an experimental **gene therapy**.
6. ☐ I understand that the Covid injections **do not and cannot protect against infection**, a fact reported in scientific publications.⁹
7. ☐ I understand that by agreeing to this injection, I am likely to be required, as indicated by the manufacturer's protocol and as endorsed by regulatory agencies, to receive **"booster shots"** that may continue indefinitely despite evidence of adverse effects on the immune system.¹⁰
8. ☐ I understand that this Covid-19 injection is not designed to address **mutating versions** or additional variants of the coronavirus.¹¹
9. ☐ I have attached a copy of the **manufacturer's fact sheet** [called a package insert for licensed versions] of the Covid-19 injection that describes the ingredients and potential material adverse events, and I am willing, able, and available to review and explain it to you.

Moderna: <https://www.fda.gov/emergency-preparedness-and-response/coronavirus-disease-2019-covid-19/spikevax-and-moderna-covid-19-vaccine>

Pfizer: <https://www.fda.gov/emergency-preparedness-and-response/coronavirus-disease-2019-covid-19/comirnaty-and-pfizer-biontech-covid-19-vaccine#additional>

Johnson & Johnson: <https://www.fda.gov/emergency-preparedness-and-response/coronavirus-disease-2019-covid-19/janssen-covid-19-vaccine>

AstraZeneca: <https://www.ema.europa.eu/en/medicines/human/EPAR/vaxzevria-previously-covid-19-vaccine-astrazeneca>

Novavax: <https://www.tga.gov.au/sites/default/files/novavax-cmi.pdf>

Other: _____

10. ☐ I understand that because some of the **ingredients** of these Covid-19 injections are proprietary and may, therefore, be secret, the ingredients listed in the manufacturers' fact sheets may be incomplete. I also understand that prior research on other vaccines has demonstrated the presence of nanoparticles, heavy metals, fetal tissue, and other substances not disclosed (or not fully disclosed) in "vaccinations."¹²
11. ☐ [U.S. only]: I understand that under the 2005 PREP [Public Readiness and Emergency Preparedness] Act, manufacturers of EUA injections are exempt from liability for injuries caused by their products, and under the 1986 National Childhood Vaccine Injury Act, licensed vaccines recommended for children and/or pregnant women are likewise shielded from liability. I understand, therefore, that it will be difficult, if not impossible, to hold the **manufacturer** of this Covid-19 injection financially or otherwise responsible for any damage to my health or for death resulting from this injection.
12. ☐ [Non-U.S.]: I have reviewed the policies or agreements in place in my country regarding indemnification and compensation; I understand that depending on these policies or agreements, manufacturers may be exempt from liability for injury. I understand, therefore, that it may be difficult, if not impossible, to hold the manufacturer of this Covid-19 injection financially or otherwise responsible for any damage to my health or for death resulting from this injection.
13. ☐ I understand that it will be difficult, if not impossible, to hold the **health institutions, doctors, and nurses** that distributed this Covid-19 injection to me financially or otherwise responsible for any damage to my health or for my death.
14. ☐ I understand that it will be difficult, if not impossible, to hold **federal, state, and local health care officials and regulators** financially or otherwise responsible for any damage to my health from the Covid-19 injection or for my death.
15. ☐ I understand, therefore, as a practical matter that I and my closest relatives will experience and shoulder the **full cost in terms of time and money** of any financial adverse impact of a material adverse event resulting from my taking this Covid-19 injection.

For Families Planning on Having Additional Children

16. ☐ I understand that this Covid-19 injection has the potential to alter my DNA in ways that no one yet understands and that this injection could alter the DNA of my **unborn children** or any woman who carries my unborn children.
17. ☐ [Pfizer and Moderna injections]: I understand that knowledgeable experts have shared serious concerns in a petition filed with the European Medicines Agency that components of the mRNA injections could trigger an immune reaction against syncytin-1, a protein responsible for development of the placenta and essential for a successful pregnancy, resulting in **potential infertility**.¹³ I also understand that Pfizer documents released by the FDA are confirming significant potential harms to women's fertility and to unborn and breastfeeding babies.¹⁴

18. ☐ [Johnson & Johnson injection]: I understand that this injection is produced in genetically modified human embryonic retinal cells (PER.C6 TetR) and that the presence of **fetal DNA fragment contaminants** in injections has been linked to autism spectrum disorder.¹⁵
19. ☐ [AstraZeneca injection]: I understand that this injection is produced in genetically modified **human embryonic kidney cells** (HEK 293).¹⁶
20. ☐ [Novavax injection]: I understand that in its published research, Novavax reported using genetically modified human embryonic kidney cells (HEK 293) in the testing phase for its Covid-19 injection. I also understand that this injection contains **polysorbate 80**, a substance linked to adverse effects on female reproductive organs.¹⁷
21. ☐ My spouse has agreed to assume the risks of such alterations of my DNA and any impact it may have on our **ability to have children** or on our unborn children.

Material Adverse Events

22. ☐ I understand and have reviewed the material adverse events reported in connection with the Covid-19 injections. **Known adverse events** include death, anaphylaxis, blood clots and related complications, leaky blood vessels and related complications, heart problems (including myocarditis, pericarditis, and others), neurological disorders, autoimmune disorders, cancer, other chronic and inflammatory conditions, blindness and deafness, infertility, fetal damage, miscarriage and stillbirth, and Covid-19.

Reasons for Taking Injection

23. ☐ I understand that, according to CDC and estimates by international researchers, Covid-19 has a survival rate of over 99.5% for individuals under age 70 (including 99.997% for children ages 0-19), and a 94.6% survival rate for those 70 and above.¹⁸
24. ☐ I also understand that there are multiple, low-cost, non-injection therapeutic **drug protocols for early intervention and prophylaxis** that have a high rate of success in helping defend against or recover from Covid-19.¹⁹
25. ☐ Nevertheless, I want to take these Covid-19 injections. The **reason(s)** why is (are):

HEALTH CARE

26. ☐ Due to the difficulties of accessing the appropriate **care in an emergency**,²⁰ I have identified and arranged health care providers who will be available on a timely basis in the event of a material adverse event from the Covid-19 injection:

| Material Adverse Event | Health Care Provider |
|--|----------------------|
| Anaphylaxis | |
| Blood clots and related complications | |
| Leaky blood vessels and related complications | |
| Heart problems (e.g., myocarditis, pericarditis, other) | |
| Neurological disorders | |
| Autoimmune disorders | |
| Cancer | |
| Other chronic/inflammatory conditions | |
| Blindness or deafness | |
| Infertility, fetal damage, miscarriage or stillbirth <i>[women only]</i> | |
| Covid-19 | |
| Other (please specify) | |

HEALTH CARE PROXY

27. ☐ I have filled out the Aging with Dignity form and **planning process** (<https://agingwithdignity.org>) and have provided a Health Care Proxy to you along with detailed instructions on resuscitation and extreme measures at end of life.
28. ☐ I have reviewed this form with the following people who have authority in my **Health Care Proxy** and have agreed to assume responsibility in the event of a material adverse event or death resulting from the Covid-19 injection:

PERSON 1: _____

PERSON 2: _____

PERSON 3: _____

INSURANCE

29. In the event of a material adverse event from Covid-19 injection, my **health care insurance**
☐ will cover ☐ will not cover all health care and hospitalization expenses.²⁰
30. [EUA/conditional injections]: My insurance broker has confirmed that page ____ of my
_____ policy states that taking an experimental or emergency-
use Covid-19 injection: ☐ will impact ☐ will not impact my **insurance coverage**.
31. [Licensed injections]: My insurance broker has confirmed that page ____ of my
_____ policy states that taking a licensed Covid-19 injection:
☐ will impact ☐ will not impact my **insurance coverage**.
32. In the event that I am unable to work for a period of time or lose my job, profession, or
business, my **disability insurance** will cover the following amounts for ____ months/
years.²⁰
- _____

33. I have reviewed my decision with my insurance broker and **additional health care and
disability or other insurance** ☐ is available ☐ is not available to cover any material
adverse event from a Covid-19 injection on the following basis:
- _____

34. In the event of my death, my **life insurance** will provide the following protection to you:
- _____

35. I have reviewed my decision with my insurance broker and **additional life insurance**
☐ is available ☐ is not available to cover any material adverse event or death on the
following basis:²¹
- _____

36. ☐ I have provided sufficient time and resources for my family and I to arrange for **other
available insurance** that my family members and I believe are prudent.

FINANCIAL INVESTMENT

Loss of Income

37. In the event of a material adverse event from Covid-19 injections, the potential range in the **loss of income** is estimated to be *[provide range if unable to work for 1 year, 5 years, or permanently]*:

| Material Adverse Event | Loss of Income (range) |
|--|------------------------|
| Anaphylaxis | |
| Blood clots and related complications | |
| Leaky blood vessels and related complications | |
| Heart problems (e.g., myocarditis, pericarditis, other) | |
| Neurological disorders | |
| Autoimmune disorders | |
| Cancer | |
| Other chronic/inflammatory conditions ²² | |
| Blindness or deafness | |
| Infertility, fetal damage, miscarriage or stillbirth <i>[women only]</i> | |
| Covid-19 | |
| Other (please specify) | |
| Death | |

Health Care Expenses

38. In the event of a material adverse event from Covid-19 injections, the potential range of **health care expenses** not covered by our health care insurance is estimated to be *[estimate potential expenses for 1 year, 5 years, or long-term]*:

| Material Adverse Event | Health Care Expenses (range) |
|---------------------------------------|------------------------------|
| Anaphylaxis | |
| Blood clots and related complications | |

| | |
|--|--|
| Leaky blood vessels and related complications | |
| Heart problems (e.g., myocarditis, pericarditis, other) | |
| Neurological disorders | |
| Autoimmune disorders | |
| Cancer | |
| Other chronic/inflammatory conditions ²² | |
| Blindness or deafness | |
| Infertility, fetal damage, miscarriage or stillbirth <i>[women only]</i> | |
| Covid-19 | |
| Other (please specify) | |
| Death | |

Long-Term Care

39. If a material adverse event from a Covid-19 injection results in the need for **long-term care**, this is how I propose to arrange such care and fund it:

Investment of Family Time

40. In the event of a material adverse event from a Covid-19 injection, here is the time I would request from my **family or professional caregivers** paid by my family to assist me:

| Material Adverse Event | Time Requested |
|---|----------------|
| Anaphylaxis | |
| Blood clots and related complications | |
| Leaky blood vessels and related complications | |
| Heart problems (e.g., myocarditis, pericarditis, other) | |
| Neurological disorders | |

| | |
|--|--|
| Autoimmune disorders | |
| Cancer | |
| Other chronic/inflammatory conditions | |
| Blindness or deafness | |
| Infertility, fetal damage, miscarriage or stillbirth <i>[women only]</i> | |
| Covid-19 | |
| Other (please specify) | |
| Death | |

Proposed Sources of Financial Support

41. If a material adverse event from a Covid-19 injection results in **adverse financial events**—loss of income and/or increased expenses—these are my estimates of costs and my arrangements to fund them:

| Material Adverse Event | Estimated Costs and My Plan to Cover Them |
|--|---|
| Anaphylaxis | |
| Blood clots and related complications | |
| Leaky blood vessels and related complications | |
| Heart problems (e.g., myocarditis, pericarditis, other) | |
| Neurological disorders | |
| Autoimmune disorders | |
| Cancer | |
| Other chronic/inflammatory conditions ²² | |
| Blindness or deafness | |
| Infertility, fetal damage, miscarriage or stillbirth <i>[women only]</i> | |
| Covid-19 | |
| Other (please specify) | |
| Death | |

DEATH

42. ☐ In the event of my death from a Covid-19 injection, I have finalized an **estate plan**, have reviewed it with my attorney and executor, and have provided instructions for my funeral and disposition of my remains as follows:

FAMILY REVIEW

43. ☐ Having completed my **due diligence** on the Covid-19 injection and having made my decision to proceed, I am available to review my findings and arrangements with my family.

I am responsible for my health care choices and am committed to taking responsibility for the true costs of my choices and their impact on those I love and not shifting these costs and risks to them without their full knowledge, due diligence, and consent. Please let me know when you would like to review and discuss.

Your loving [spouse/parent]

Notes to the Form

1. "Covid-19 Health Experiences Survey" results available at <https://mark-skidmore.com/wp-content/uploads/2022/02/Survey-of-Covid-Health-Experiences-Working.pdf>.
2. Available at <https://www.oraclefilms.com/mattletissier> and <https://www.oval.media/en/769-athletes-collapsed-this-year-during-competition-whats-going-on/>.
3. See "Part 1: Moderna had a long history of failure. Then along came COVID" (<https://childrenshealthdefense.org/defender/moderna-history-failure-covid-vaccine/>); also note that in Moderna's briefing document on its experimental injection, reviewed by FDA in December 2020 (<https://www.fda.gov/media/144452/download>, page 15, tables 7 and 8), Moderna refers to a 23.9% rate of adverse events in the first 28 days, statistics that do not include the longer-term effects of DNA modification, infertility, autoimmunity, etc.
4. See "Pfizer fined \$2.3 billion for illegal marketing in off-label drug case" (<https://abcnews.go.com/Business/pfizer-fined-23-billion-illegal-marketing-off-label-story?id=8477617>). To get more of a sense of the company's character, see "Softball Pfizer vaccine rollout interview goes horribly wrong." <https://www.youtube.com/watch?v=LMAZJtOdYNI>
5. See, for example, "Johnson & Johnson to pay \$2.2B in U.S. health care fraud settlement" (<https://www.cbsnews.com/news/johnson-johnson-to-pay-22b-in-us-health-care-fraud-settlement/>) and "Johnson & Johnson sets aside \$3.9 Bln for baby powder verdict, settlements" (<https://markets.businessinsider.com/news/stocks/johnson-johnson-sets-aside-3-9-bln-for-baby-powder-verdict-settlements-1030109923?op=1>).
6. See "10 biggest pharmaceutical settlements in history" (<https://www.enjuris.com/blog/resources/largest-pharmaceutical-settlements-lawsuits/>).
7. See announcement of class action lawsuit against Novavax for violations of federal securities laws, "including omissions and fraudulent misrepresentations" (<https://www.prnewswire.com/news-releases/nvax-class-action-alert-kessler-topaz-meltzer-check-llp-announces-to-novavax-inc-of-deadline-in-securities-fraud-class-action-lawsuit-301449517.html>).
8. See "Pfizer, FDA dodge media questions about Pfizer Comirnaty vaccine" (<https://childrenshealthdefense.org/defender/pfizer-fda-media-pfizer-comirnaty-vaccine/> and <https://childrenshealthdefense.org/defender/fda-cdc-approval-moderna-spikevax-vaccine/>); see also, "Here's why no one can force you to take Pfizer's newly 'approved' Comirnaty vaccine" (<https://childrenshealthdefense.org/defender/no-one-can-force-you-pfizers-comirnaty-vaccine/>).
9. See "On COVID vaccines: why they cannot work, and irrefutable evidence of their causative role in deaths after vaccination" (<https://doctors4covidethics.org/on-covid-vaccines-why-they-cannot-work-and-irrefutable-evidence-of-their-causative-role-in-deaths-after-vaccination/>).
10. As of late May 2022, the FDA had authorized two booster doses of the mRNA injections, and the EMA had authorized an initial booster and two booster doses in the very oldest (age 80 and above). For information about the risks of boosters, see "COVID vaccines aren't working—and no amount of boosting will change that" (<https://childrenshealthdefense.org/defender/covid-vaccines-arent-working-boosting-change/>). See also, "EU regulators, WHO call for end to COVID boosters, citing evidence strategy is failing" (<https://childrenshealthdefense.org/defender/eu-regulators-who-end-covid-boosters/>).
11. See, for example, "Pfizer set to roll out Omicron shot in March, as experts warn 'we can't vaccinate the planet every 4 to 6 months'" (<https://childrenshealthdefense.org/defender/pfizer-roll-out-omicron-shot-march/>).
12. In 2017, Italian researchers reviewed the ingredients of 44 types of so-called "vaccines." They discovered heavy metal debris and biological contamination in every human vaccine they tested. They stated, "The quantity of foreign bodies detected and, in some cases, their unusual chemical compositions baffled us." They then drew the obvious conclusion, namely, that because the micro- and nanocontaminants were "neither biocompatible nor biodegradable," they were "biopersistent" and could cause inflammatory effects right away—or later. From Catherine Austin Fitts, "The Injection Fraud: It's Not a Vaccine" (<https://childrenshealthdefense.org/news/editorial/the-injection-fraud-its-not-a-vaccine/>). In separate analyses of aborted fetal cell lines in "vaccines," investigators have identified abnormal human DNA, including genes associated with cancer, in all samples analyzed in quantities "up to 300 times higher than the limit imposed by the [European Medicines Agency] for carcinogenic DNA." From Corvelva, "New data shows DNA from aborted fetal cell lines in vaccines" (<https://childrenshealthdefense.org/news/new-data-shows-aborted-fetal-cells-in-vaccines/>). See also, "Vaccines contain dangerous ingredients..." (<https://childrenshealthdefense.org/vaccine-secrets/video-chapters/vaccines-contain-dangerous-ingredients-small-doses-can-be-unhealthy-disease-is-a-product-of-genetics-and-environment/>).
13. See "Petition/Motion for Administrative/Regulatory Action..." (https://dryburgh.com/wp-content/uploads/2020/12/Wodarg_Yeadon_EMA_Petition_Pfizer_Trial_FINAL_01DEC2020_signed_with_Exhibits_geschwarzt.pdf); see also fact#6 here: <https://americasfrontlinedoctors.org/2/12-facts-you-need-to-know-about-the-vaccine-before-you-decide-to-take-it/>

See "All treatment (not preventative) options if you have COVID-19 or vaccine injured or long haul syndrome" (<https://americasfrontlinedoctors.org/covid/treatment-options/>); see also, pp. 6-9 of "America's Frontline Doctors White Paper" https://americasfrontlinedoctors.org/2/wp-content/uploads/2021/06/6076e4fd8bde421370729e47_Vaccine-PP.pdf) and "On the treatment of Covid-19" at Swiss Policy Research (<https://swprs.org/on-the-treatment-of-covid-19/>).
20. Many health care providers are refusing service to individuals injured by the Covid-19 injections, and some health and life insurance companies are declining coverage for injection-related injuries and deaths. See "Del Bigtree interviews 3 medical professionals incapacitated by Covid injections," *The Highwire*, April 29, 2021. <https://www.bitchute.com/video/A4d8FB2cIBTc/>
21. See, for example, "Life insurer refuses to cover vaccine death" (<https://freewestmedia.com/2022/01/14/life-insurer-refuses-to-cover-vaccine-death/>) and "If you die from Coronavirus 'vaccine,' your life insurance won't pay as it's an 'experimental medical intervention'" (<https://tapnewswire.com/2021/03/if-you-die-from-vaccine-your-life-insurance-wont-pay-as-its-an-experimental-vaccine/>). See also, "Diamond mine of data? Insurance companies report 40% increase in premature non-COVID deaths" (<https://childrenshealthdefense.org/defender/insurance-companies-report-increase-premature-deaths/>); "German insurance company fires CEO who released COVID vaccine injury data, then scrubs data from website" (<https://childrenshealthdefense.org/defender/german-insurance-fires-andreas-schofbeck-covid-vaccine-injuries-data/>); and "Life insurance companies suffered while the funeral industry prospered in 2021 after COVID vaccines were rolled out" (<https://vaccineimpact.com/2022/life-insurance-companies-suffered-while-the-funeral-industry-prospered-in-2021-after-covid-vaccines-were-rolled-out/>).
22. In a panel for a screening of the film *Vaxxed*, one U.S. mother claimed that a seriously vaccine-injured child would cost \$5 million present value over their lifetime. A WHO report (https://apps.who.int/gb/ebwha/pdf_files/WHA67/A67_17-en.pdf) dated March 21, 2014 stated: "Initial data from studies in the United Kingdom of Great Britain and Northern Ireland and the United States of America indicate that estimated lifetime costs of caring for individuals with autism spectrum disorders lie between US\$ 1.4 million and US\$ 2.4 million per case according to the level of intellectual impairment" (page 2, item 11). The WHO report added that "The reduction in family earnings due to the need to provide care for family members with autism spectrum disorders compounds the problem." A 2015 study by University of California–Davis health economists estimated that autism's annual costs in the U.S. could reach \$500 billion—and potentially \$1 trillion—by 2025 (<https://www.universityofcalifornia.edu/news/autisms-costs-estimated-be-500-billion-potentially-1-trillion-2025>). Even in the short span of a year, individuals injured by Covid injections have incurred hundreds of thousands in health care costs. See "Hundreds injured by COVID vaccines turn to GoFundMe for help with expenses" (<https://childrenshealthdefense.org/defender/hundreds-injured-covid-vaccines-gofundme-expenses/>); "Vaccine-induced myocarditis injuring record number of young people. Will shots also bankrupt families?" (<https://childrenshealthdefense.org/defender/vaccine-induced-myocarditis-injuring-young-people/>); and "Woman with 'life-altering' injuries after COVID vaccine teams up with U.S. senators to demand answers" (<https://childrenshealthdefense.org/defender/brianne-dressen-injuries-astrazeneca-covid-vaccine-senators-demand-answer/>).
